

HOW TO MAKE A SYSTEM

Enquiry : teamflora2018@yahoo.co.jp

1 Let's put a medium

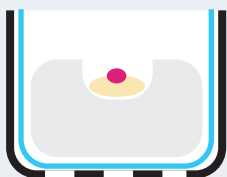

Leave a hole in the bowl.

Put a cloth or net on a pot and make a medium such as soil, sand, rock wool.

2 Let's sow seeds

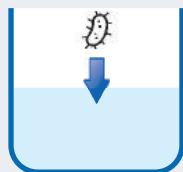

Drill holes in the medium and add seeds and mycorrhizal fungi.

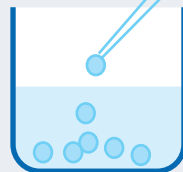

3 Let's make nitrifying bacteria beads

Dissolve sodium alginate little by little in hot water to make a 2.5% solution.

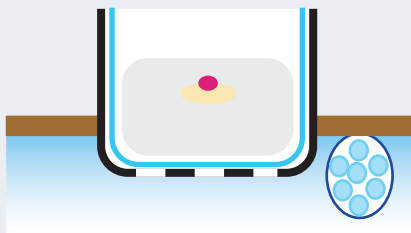

Cool (1) from 30 to 35 , add the same amount of nitrifying bacteria as hot water and mix,

Drop(2) drop by drop in 1.5% calcium chloride solution.

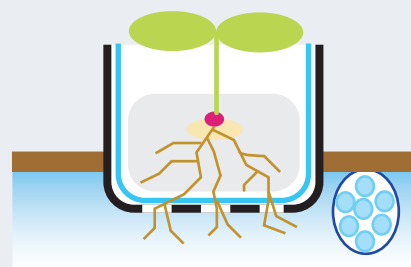

4 Let's set a device on the water

Fix pots and beads to the device and float on water. Fix it around with a rope so that it does not flow.

5 Let's make various crops

With this system, you can make various crops. Please make it by ourselves and cultivate it !
